

## **CLAIMS**

1. (previously canceled)

8. **(amended)** A stabilizer wire mount for attachment to a mounting surface on a pole by attachment bands comprising:

a singular base plate having a top surface and a bottom surface, said bottom surface having front and back edges;

an integral boss position substantially centrally on the top surface, and extending integrally substantially upwardly therefrom;

a loop ~~on~~ formed integrally in the boss, the loop defining an opening therethrough for the attachment of the stabilizer wire;

at least one upwardly extending raised rib on the top surface at an appropriate distance from the boss, thereby defining a channel between the boss and the at least one raised rib for the seating of an attachment band; and

a pair of depending serrated edges on the bottom surface of the base plate, one of each pair extending downwardly proximate the front and back edges of the bottom surface for the base plate, said depending serrated edges disposed to engage the utility pole upon a tightening of the band.

2. (original) The mount of claim 8 wherein the top surface includes a second raised rib positioned an approximate distance from the boss on a side of the boss opposite that of the at least one raised rib thereby defining a channel between the boss and the second raised rib for the seating of an attachment band.

3. (original) The mount of claim 8 wherein the base plate is substantially rectangular in configuration.

4. (original) The mount of claim 2 wherein the top surface includes a third raised rib on same side as the at least one raised rib and positioned an appropriate distance from the at least one raised rib thereby defining a channel between the at least one raised rib and the third raised rib for the seating of an attachment band.

5. (original) The mount of claim 4 wherein the top surface includes a fourth raised rib on a side of the boss opposite that of the at least one raised rib and positioned an appropriate distance from the second raised rib thereby defining a channel between the second raised rib and the fourth raised rib for the seating of an attachment band.

6. (original) The mount of claim 8 wherein the elements of the mount are integrally cast from aluminum.
